

## Joint BOE, ECB, CEPR and CFM conference

# Credit Dynamics and the Macroeconomy

London, 10-11 December 2015  
Hosted by the Bank of England

Credit market dynamics have increasingly influenced macroeconomic developments in recent years. Notably, since the start of the recent Great Recession, credit markets have been the source macroeconomic disturbances as well as been instrumental in transmitting shocks originating in other sectors of the economy. Given the likely fundamental changes that credit dynamics has seen in relation to the macroeconomy in recent years, a re-assessment of the theoretical and empirical modelling of the links between credit and macroeconomic variables is warranted.

This conference aims to bring together policymakers and academics interested in these issues, and in particular on the following:

- the implications of the crisis for analysing the role of credit in the macroeconomy before, during and after the crisis
- empirical studies on the driving forces of credit and channels of transmission of credit shocks, including micro-data studies
- recent modelling advances in both theoretical (i.e., DSGE) and empirical models, with special focus on modelling of the banking sector
- theoretical and empirical analysis of the recent financial crisis in a global and historical perspective

### Keynote speakers:
